

EGYPT

The digital geo-referenced database of the Egyptian Land Cover is about to finish and be handed over to the focal point within the next three months. The current status of the project is that;

1. Digitization has been completed
2. Coding according to the Africover specification , geocoding and “edge-matching” all scenes is progressing.

FUTURE INITIATIVES

1. Prepare at the National Focal Point, SWERI a facility to house the database generated from the project.
2. Updating capacity at capability.
3. Generate the interest among the Egyptian Working Group to use the data according to their individual needs.
